

August 2017

Gasoline comes from crude oil. This oil was formed from plants and animals that lived millions and millions of years ago. Time passed, and their remains became buried. High temperatures and intense pressure affected the plants and animals and turned them into liquid oil. Gasoline is called a "fossil fuel" because it is made from animals and plants that were alive millions of years ago.

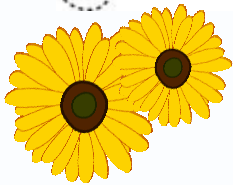

Gasoline History

In 1859, the first U.S. oil well was dug in Titusville, Pennsylvania. The crude oil was used to make kerosene. Gasoline was a by-product of that process. However, according to the U.S. Energy Information Administration, gasoline was not really important until 1892, when the automobile was invented.

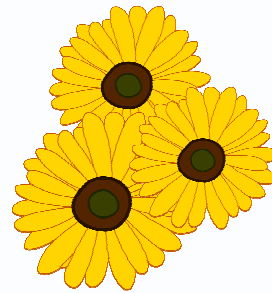

In less than 30 years, 9 million cars were using gasoline in the U.S

In 2016, the United States consumed a total of 7.19 billion barrels of petroleum products, an average of about 19.63 million barrels per day.

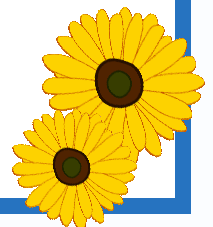

One barrel of oil equals 42 gallons.

Hi!
I'm Drippy the Oil Drop.
Always recycle you
used oil & filters

East Side Oil Companies Recycling Division
Accepts the following at our public site:
Used Oil = FREE
Used Oil Filters = \$0.50 each
Used Antifreeze = \$1.00 per gallon

Closing Crude Prices
